

TRB-006 — Discovery

Submitter: **Jason S Freeman**

Request: *Archives by customer and submission Month/Date*

Proposed Solution: TRB-006 — Archives by customer and submission month/date

What is proposed

- Add a new "Submissions Archive" section, separate from the active Submission Status view, that contains every completed and failed submission past a 30-day rolling window.
- Group archive entries by customer (top-level) and by submission month/date (sub-level). Allow toggling between "by customer" and "by month" pivot views.
- For each archived submission, capture the final status (completed / failed), failure reason if any, customer id, submission date, and a link to the original submission record.
- Move the existing Submission Status view to show only active or recently-completed-or-failed submissions (anything under 30 days), so the active view stays fast and uncluttered.
- Add search and filter on the archive (date range, customer, status).

Desired outcome

- The Submission Status view stops being a junk-drawer of every submission ever — it shows only what is currently actionable.
- A bookkeeper or admin can quickly retrieve any historical submission by customer or by month/date, including failed submissions and their reasons.
- Finance can pull a monthly report of submissions by customer for billing or reconciliation purposes.
- Operations can spot failure patterns over time (e.g., "Customer X has 4 failed submissions in March").

Success criteria

- Submissions older than 30 days no longer appear in the Submission Status view; they appear in the Submissions Archive.
- Archive supports both "by customer" and "by month" pivot views, switchable in the UI.
- Archive page load is ≤ 2 seconds for datasets up to 10,000 submissions.
- E2E test: create 5 submissions, mark 2 as completed, 1 as failed, advance time 31 days, verify all 3 appear in the archive (and not in Submission Status) grouped correctly by customer.
- A monthly customer-billing report can be generated from the archive in one click and exported to CSV.
