

TRB-008 — Discovery

Submitter: **Jason S Freeman**

Request: *Contact Information needs to be changed*

Proposed Solution: TRB-008 — Contact info should default to submitter, not Owner

What is proposed

- Change the form's auto-populate logic for the "Contact" fields (name and phone) on a new submission: instead of pulling from the customer Owner record, pull from the authenticated user (the bookkeeper or whoever is actually filling out the form).
- Keep the Owner record visible but separate — display "Account Owner: " as a labeled read-only field so submitters still see who owns the account, but it is not pre-populating the submission contact.
- Allow the submitter to override the auto-populated contact info on a per-submission basis (sometimes they want a different person on a particular filing).
- For audit purposes, store both the submitter and the contact-on-record on each submission, in case they differ.
- Migrate existing in-flight (not-yet-completed) submissions so their contact info reflects the submitter rather than the Owner where they differ.

Desired outcome

- A bookkeeper filing on behalf of a small business no longer has to manually edit the contact name and phone every time they submit — it's pre-filled correctly.
- Audit trails clearly show who submitted (the actual human) and who is on record as the contact (which may or may not be the same person).
- Owners remain visible to the submitter so it's clear which account they're filing under.
- No existing submission already accepted into the pipeline is retroactively modified.

Success criteria

- E2E test: log in as a bookkeeper user for a business whose Owner is a different person, start a new submission, verify the Contact fields are auto-filled with the bookkeeper's name and phone, not the Owner's.
- E2E test: the submitter can edit the contact fields before submitting; the override is respected and stored.
- Submissions already in `completed` or `failed` state are NOT modified by the migration.
- Audit log on any submission shows both `submitted\_by` (user id) and `contact` (free-form fields), regardless of whether they match.
- Customer-facing change-log entry posted explaining the new behavior so existing submitters know what to expect.
